

## 300-500 word abstract describing your city.

Ingleside also known as "Home Of The Noonies" is located on the shores of [Lake Saint Lawrence](#). Ingleside once was home to many villages and hamlets, but it all was lost forever. Ingleside had a population of exactly 2,000 people. During construction of the St. Lawrence Seaway and Power Project, a Canadian-American collaboration which combined the expansion of the St. Lawrence River for shipping purposes. On July 1st, 1958 the water of the soon-to-be-created Lake St. Lawrence began to flood the landscape of Ingleside. The residents of the villages and hamlets had been told that this project would improve their lives and better the futures of their children but as they prepared to move to the new towns it became increasingly obvious what they were losing.

The rebuilt-city of Ingleside is an even greater place to live than the old, flooded city of Ingleside. It has many key points such as an airport with many runways, which allows people to travel to and from the city, and the city also has many seaports, which allows us to ship goods amongst many other countries. The city of Ingleside also has a military base, which provides many employment opportunities for civilians in and around the city of Ingleside. Two Fusion Energy Plants power the city of Ingleside; also to reuse toxic waste, there is a toxic waste conversion plant.

Aside from the industrial type buildings in Ingleside, we also built many residential and commercial type places that allow people to have fun such as sports parks, which allows kids to use their energy in a positive way and stay out of trouble. We also built a casino row where adults can have fun away from various stressful places, which in turn can lower stress levels of the citizens. For both kids and adults we built a boat marina where people can store their boats and also travel on the St. Lawrence Seaway in their boats. Aside from the places that I just stated, there are also many parks, ponds, and playgrounds. There is also a Performance Arts Center where people can express their talents and can also be used for entertainment purposes for all ages.

To raise education levels of the civilians in Ingleside we built a sufficient amount of schools and colleges. We also built one university and all of the educational facilities in the city of Ingleside are grade "A". We also built many libraries and museums to raise the citizen's education levels.
