

Whittier Middle School Abstract

Zoollallacropah

Have you ever wanted to visit an underwater city? Here's your chance! The name of the city is Zoollallacropah better known as The "Zoo." How can I find out more about how this spectacular city began? Well, I'm glad you asked!

This city is beautiful! It's like any other land based city only better. The city is free of pollution and all the citizens are employed and housed. You and your family won't have to worry about feeling unsafe because the submolice (our police department) and the supershields (around each dome) have everything under control. Zoollallacropah is always clean because geothermal and hydroelectricity is the power used to fuel all our needs.

The city of Zoollallacropah is divided into six domes. Each dome contains a different section of the underwater city. The in-dome transportation needs of the citizens are provided by moving sidewalks and subways. Inner dome transportation is provided by high speed mag-lift trains that run under the sea floor.

As with all large cities there many difficult decisions to make. One of our first decisions was water purification. In order to purify the water we built purifying centers that bring in ocean water. The ocean water goes through a number of step where is desalinated and purified. After the ocean water has undergone a purification process, we sale the access salt as a trading resource.

Another problem we faced was sewage treatments and waste. We didn't want to pollute our wonderful city so we came up with a system called pass-da-waste. The waste is sent through one of our waste treatment plants. After the pollutants are removed the

water is used for hydroponics farming and the solid waste is petilized and sold to the main land for fertilizer.

Houses are very special in Zoollallacropah. Their free flowing design to match their underwater environment. In “Zoo” our education philosophy is centered around neighborhood schools that are open 24 hours a day for community activity. After graduating from high school students can enroll in our award wining university, which has one of the finest research facilities in the United States.

Most people work in our high tech dome or the hydro domes that produce our main resources Zoollallacropah fruit and fruit products. They export the fruit to gourmet shops and stores all over the world.

You can explore many wonderful sites in Zoollallacropah. You can visit our TCS Amusement and Water Park. It’s two in one. It has heart dropping rollercoaster and slippery slides for you to experience. For those who are interested in sea life cone to our World Famous Sea aquarium and when you get exhausted, you can relax at our Atlantis Spa. You can also tour our resource dome and science center.

In conclusion this city that started as a dream has made excellent development. The Zoo began as a dream to live under the sea. Who would think a small dream would turn into a big reality.
